

TECHCRM · HOW IT WORKS

From a new lead to a scored deal

Every step the system takes, in order, in plain words, with the exact file that does the work. Verified working on 15 September 2026.

☐ Normal CRM step ☐ An AI model runs ☐ A person decides

FOLDER	WHAT IT IS	PORT
frontend\	The screens you click on	5173
backend\	The main app — runs every step	8080
Llama3_CRM\	The AI that reads text (3 skills in one)	8001
DealIntelligence_CRM\	The deal-reading skill + its rulebook	—
XgBoost\	The model that gives the deal score	8000

Part 1 – The lead

A new contact comes in, gets a first score, and a person decides if it is worth pursuing.

1

Sign up

The first person to sign up creates the company account and becomes its admin.

FILE backend\...\auth\AuthService.java
SAVES organizations, users

2

A lead is added

Someone types in a new contact, uploads a CSV, or an email arrives.

SCREEN frontend\...\screens\MainScreens.tsx
FILE backend\...\lead\LeadService.java
SAVES leads

3

AI gives the lead a score

The AI reads the lead and gives a score from 0–100 and a label: HOT, WARM or COLD.

FILE backend\...\lead\AiScoringClient.java
AI Llama3_CRM\scripts\main.py → skill "lead_scoring"
WEIGHTS Llama3_CRM\outputs\lead_management_llama3_lora\

4

Meetings are logged – the score moves

After each call, the AI reads the notes and the score goes up or down. This repeats every meeting.

FILE backend\...\lead\score\LeadMeetingExtractionClient.java
SCORE backend\...\lead\score\LeadScoreFluctuationEngine.java
AI Llama3_CRM\scripts\main.py → skill "meeting_extraction"
SAVES lead_score_history

5

A person clicks Qualify

The AI only advises. A person makes the final call. Qualified leads go to the least busy sales rep.

SCREEN frontend\...\crm\QualifyControl.tsx
FILE backend\...\lead\score\LeadScoreController.java

6

The lead becomes a deal

A company account is found or created, and a deal is opened with a reference like OPP-000023.

SCREEN frontend\...\crm\ConvertLeadModal.tsx

FILE backend\...\lead\LeadConversionService.java

SAVES accounts, deals

Part 2 — Scoring a deal

Every time a sales rep writes up a meeting, the deal gets a new score. All of this runs in one go.

7

Rep writes up the meeting

Summary, budget, objections, timeline, next steps. This is saved first, so it is never lost.

```
SCREEN  frontend\...\crm\MeetingOutputForm.tsx
FILE    backend\...\dealflow\DealFlowService.java
SAVES   meeting_outputs
```

↓

8

Look up what we already knew

The system fetches the deal's details from the last meeting, so nothing learned earlier is forgotten.

```
FILE    backend\...\dealflow\FeatureSetRepository.java
READS   feature_sets
```

↓

9

AI reads the meeting and fills in 14 fields

Things like budget status, buying intent, objections. It updates only what this meeting changed and keeps the rest. It tries three ways, in order — the first that works is used:

1 · Deal AI ✓ used

Remembers past meetings
dealflow\DealStateClient.java

2 · Basic AI

If 1 is down. Reads this meeting only
dealflow\DealAnalysisClient.java

3 · Keyword search

If AI is down. Rough guess
dealflow\HeuristicMeetingAnalyzer.java

```
AI       Llama3_CRM\scripts\main.py → skill "deal_state"
WEIGHTS  DealIntelligence_CRM\outputs\deal_state_llama3_lora\
RULES    DealIntelligence_CRM\scripts\deal_state_format.py
SAVES    deal_analyses, extracted_parameters
```

↓

10

Fix the words to match the scoring model

The score model only accepts certain exact words. Anything close — like "positive sentiment" — is corrected to "Positive".

```
FILE    backend\...\dealflow\DealParameters.java
```

↓

11

Add 3 numbers and build the full list of 17

The 14 fields from the AI, plus 3 the app calculates itself: meeting count, lead score and engagement score.

FILE backend\...\dealflow\FeatureEngineeringService.java
SAVES feature_sets ← read again at step 8 next meeting

12

XGBoost gives the deal score

This is the only step that produces the score: a number from 0–100 and a band — HIGH, MEDIUM, LOW or VERY LOW.

FILE backend\...\deal\DealScoringClient.java
SERVER XgBoost\serve_api.py
MODEL XgBoost\models\deal_score_v1.0.0_20260802_062230Z.pkl
SAVES deal_predictions, deals

13

The score shows on screen

SCREEN frontend\...\crm\DealScoreCard.tsx

Part 3 – Review and close

A manager checks the AI's advice, and the deal moves toward a win.
